Full right to work in the UK, no sponsorship required

PROFESSIONAL SUMMARY

BI and Data Analyst (MSc Business Analytics, Merit) with over six years across product analytics, MIS and enterprise reporting, most recently as Senior Analyst building Power BI reporting for Emirates Global Aluminium. Lifted onboarding conversion 14% at smallcase and cut repeat SLA breaches 15% at HCLTech. Builds in Power BI, SQL and Python, with every reported figure reconciled to source.

CORE SKILLS

BI & Visualisation: Power BI (DAX incl. time intelligence and dynamic segmentation, Power Query, RLS, semantic modelling, star schema, TMDL/PBIP, what-if analysis), Tableau, Advanced Excel (PivotTables, XLOOKUP, SUMIFS, Power Query), self-serve dashboards, MIS, KPI and SLA reporting

Data & Engineering: SQL (PostgreSQL, DuckDB), Python (pandas), data modelling, ETL, data quality, validation and reconciliation, bronze-silver-gold warehouse layers, Git and GitHub, automated testing, LLM integration

Analysis & Modelling: Product analytics (event tracking, funnel and retention cohort analysis), causal inference (difference-in-differences), regression, forecasting, inventory optimisation, churn analysis

Domain & Governance: Regulated financial services (bancassurance), Tally ERP, compliance screening, UK GDPR pseudonymisation, stakeholder requirements gathering and prioritisation

PROFESSIONAL EXPERIENCE

Business Intelligence Analyst (Intern) — Koru Green | Sep 2024 – Nov 2024

Royalty and revenue analytics for a music and media business | Remote, UK

- **Found a 7.5% revenue understatement risk:** the largest revenue source (33% of income) was split across two records. Re-keyed the model on the unique identifier to remove it.
- **Built four Tableau dashboards for the Managing Director**, reconciling thousands of transactions across 20+ providers and 158 markets into one reporting set that passed all 16 accuracy checks.
- **Quantified revenue concentration for executive review:** one provider held 37% of revenue, at the lowest rate paid, and accounted for all quarterly reversals.

Senior Analyst — HCLTech | Jan 2022 – Dec 2023

Operational performance reporting for Emirates Global Aluminium (EGA), Dubai | Lucknow, India

- **Built a Power BI star-schema model** (DAX time intelligence, dynamic segmentation, RLS) **adopted by executive leadership** to track critical operational KPIs, and automated the monthly management pack with SQL and Power Query, **cutting manual reporting effort 30%** (~15 analyst-hours a month).
- **Gathered and prioritised reporting requirements with EGA management** and delivered monthly executive steering packs and weekly operational reviews on incident volume, SLA compliance, backlog and resolution time. Migrated reporting from BMC Remedy to ServiceNow mid-contract with **zero disruption**.
- **Cut repeat SLA breaches 15% quarter on quarter, lifted SLA compliance 8 points and reduced repeat incidents 18% against baseline** by analysing ~4,200 monthly incidents and service requests across two UAE sites (Jebel Ali, Al Taweelah) to expose failure patterns and backlog bottlenecks.
- **Presented findings to 25+ stakeholders** across Service Desk, Infrastructure, Enterprise Applications and Site Operations and agreed remediation, **reaching 90%+ closure of corrective actions within target**. Mentored 3 junior BI and reporting analysts.

Corporate Agency Manager — HDFC Life | Sep 2020 – Jan 2022

MIS Analyst | Lucknow, India

- **Produced daily, weekly and monthly MIS reporting across 5 core BFSI systems**, consolidating large operational datasets in Excel (XLOOKUP, PivotTables, SUMIFS) and **cutting report turnaround 45%**.
- **Reconciled premium collections and commissions across 15+ branches**, identifying billing discrepancies and maintaining 99.8% reporting accuracy.
- **Tracked KPIs, advisor productivity and branch performance for regional managers**, with ad hoc analysis that **reduced process turnaround time 15%**.

Analytics Associate — smallcase | Jul 2017 – Aug 2020

Fintech product analytics | Bengaluru, India

- **Owned product analytics across three verticals** (B2C app, Publisher tools and Broker Gateway), working with engineering to **lift event tracking accuracy to 98%+**.
- **Traced broker-login friction through funnel and retention cohort analysis** in SQL and Python, **driving a 14% increase in onboarding conversion**.
- **Launched 12+ self-serve dashboards** for product, marketing and partnerships teams, **cutting ad hoc data requests 40%** and saving around 12 hours a week.

Accounts Executive — Meridian Associates | Jun 2016 – Jul 2017

Lucknow, India

- Managed ledgers, AP/AR and invoicing for **15+ client accounts in Tally ERP** and built monthly MIS packs, with **automated Excel reconciliations that cut discrepancy resolution time 30%**.

INDEPENDENT ANALYTICS PROJECTS | JAN 2025 – PRESENT

Designed and built end to end, with code, documentation and dashboards public at github.com/Shivansh9307.

Northstar | Causal Demand, Promotion & Inventory Analytics | Python · DuckDB · Power BI (DAX) · Causal Inference

Measured what promotions actually earn a synthetic 20-store UK grocery chain.

- **Showed the standard promotion-lift measure overstated returns** (+126.7% against a true +81.0%). A difference-in-differences correction brought it to +96.4%, **removing 64% of the bias**, and is reported as an upper bound because pre-trend tests showed the key assumption only partly held.
- **The naive estimate backs 19 promotions that all lose money; the corrected one backs 10 profitable ones**, capturing 96.8% of perfect-knowledge profit on the same budget.
- **Showed cost-based reorder points beat a flat 95% availability policy by £16,320 per quarter**.
- Built a five-page Power BI report on a star schema (**45 DAX measures**, what-if profit simulator, YoY time intelligence), reconciling every headline measure against independently computed values.

UK Corporate Compliance Radar | PostgreSQL · SQL · Power BI (DAX) · Python · LLM document extraction

Ranked 10,000 Companies House records into a risk watchlist a compliance team could work through.

- **Cut a director-risk rule's false alarms from 60 flagged directors to 4** by tracing the over-firing to a data definition error (routine closures counted as insolvencies).
- **Caught a sampling bias** (92% overdue filers against an 8.6% register baseline) and replaced it with a reproducible random sample (**11.3%**).
- **Cut an LLM screening layer's false positives from 18 in 20 to 3 in 20** by hand-verifying flagged cases against source accounts; held at **9.2% across 239 unseen companies**.
- Built a **bronze-silver-gold PostgreSQL warehouse** and star schema feeding a two-page Power BI drill-through watchlist that isolates **20 high-risk companies (0.2%)**, with directors pseudonymised under UK GDPR.

Atlas | Validated Analytics Pipeline | Python · DuckDB SQL · LLM tool-calling · Automated Testing

- Built a pipeline that **blocks any result it cannot independently re-derive**: 18 specialist agents, read-only enforcement at two layers and 380 automated tests. Its validator **vetoed a model at chance-level accuracy (AUC 0.4954)** before release.
- **On a real customer dataset of 64,374 records, found churn jumps from 10.1% to 71.3%** once payments run 16+ days late.

EDUCATION

MSc Business Analytics (Merit) — Aston University, Birmingham, UK | Jan 2024 – Jan 2025

- Dissertation: natural language processing for financial fraud detection, a **4.6× improvement in precision-recall AUC (0.14 to 0.64)**.

BCom (Honours), Commerce & Finance — Amity University, Lucknow, India | 2013 – 2016
