PROFILE

Data & BI Analyst with an MSc in Business Analytics (Merit, Aston) and two years of enterprise reporting at HCLTech, delivering SLA and KPI reporting to client leadership and cutting manual reporting effort by 30%. Since then, has built analytics systems that catch expensive mistakes before they reach a decision. One cut a compliance screening tool's false alarms from 60 flagged directors to 4, giving a review team a shortlist they could work through. Another showed that the standard promotional-lift measure overstates returns by half again, backing 19 promotions that all lose money against 10 profitable ones on the same budget. Builds in Power BI, SQL and Python, with every published figure traceable back to its source.

CORE SKILLS

BI & Visualisation: Power BI (DAX, Power Query, semantic modelling, star schema, TMDL/PBIP), Tableau, Advanced Excel (PivotTables, Power Query, lookups), dashboard development, KPI and SLA reporting

Data & Engineering: SQL, PostgreSQL, DuckDB, Python (pandas), data modelling, ETL, data quality and validation, Git, CI/CD, LLM integration, agent orchestration, LLM cost governance

Analysis & Modelling: Causal inference (difference-in-differences, IPW), regression, forecasting, optimisation and simulation, classification evaluation, root cause analysis

Domain & Governance: Regulated financial services, compliance screening, UK GDPR data pseudonymisation, stakeholder requirements gathering

PROJECTS

Independently designed and built, Jan 2025 – Present. Code, documentation and dashboards public at github.com/Shivansh9307

Northstar — Causal Demand & Promotion Analytics | Python · DuckDB · Power BI (TMDL) · Causal Inference

Measured what promotions actually earn a UK grocery chain — and showed the standard method backs 19 promotions that all lose money.

- **Proved the standard promotional-lift measure overstates returns by half again** (+126.7% against a true +81.0%), correcting it with difference-in-differences to remove **64% of the bias**.
- **The naive estimate backs 19 promotions that all lose money; the corrected one backs 10 profitable** — capturing 96.8% of perfect-knowledge profit on the same budget.
- Engineered a **2.19M-row** simulated retail estate with bias and censoring encoded and the true effect recorded, so every estimate was **scored against a known answer**; delivered via a five-page Power BI layer (**45 DAX measures**).

UK Corporate Compliance Radar | PostgreSQL · Power BI (DAX) · LLM Document Extraction

Turned 10,000 Companies House records into a ranked watchlist a compliance team could work through.

- **Cut a director-risk rule's false alarms from 60 flagged directors to 4** by tracing the over-firing to a definitional error — routine closures counted as failures — and redefining the trigger.
- **Cut an LLM screening layer's false positives from 18 in 20 to 3 in 20** by hand-verifying flagged cases against source accounts; held at **9.2% across 239 unseen companies**.
- Modelled a **10,000-record** PostgreSQL warehouse and star schema into a Power BI DAX drill-through watchlist, isolating **20 high-risk companies (0.2%)**, all directors pseudonymised under UK GDPR.

Atlas — Multi-Agent Analytics Pipeline | Python · SQL · Agent Orchestration · LLM Tool-Calling

Built an analytics pipeline that stops a result reaching a stakeholder unless it can be independently re-derived.

- Built a multi-agent pipeline orchestrating **18 specialist agents** with read-only enforcement at two layers and **380 automated tests**; its validator vetoed a model at chance-level accuracy (**AUC 0.4954**) before it reached a stakeholder.

EXPERIENCE

Koru Green — Business Intelligence Analyst (Intern)

Sep 2024 – Nov 2024

Royalty and revenue analytics for a music and media business

Remote, UK

- **Eliminated a 7.5% revenue understatement risk** by identifying that the largest revenue source — 33% of income — was fragmented across two records, and re-keying the model on the unique identifier.
- **Built four Tableau dashboards for the Managing Director**, reconciling 5,147 transactions across 20+ providers and 158 markets into one reporting set passing all 16 accuracy checks.
- **Quantified revenue concentration for executive review**: one provider held 37% of revenue at the lowest rate paid and all quarterly reversals; modelled a 10% rate cut at 3.67% of quarter.

HCLTech — Senior Analyst

Jan 2022 – Dec 2023

Operational performance reporting and analysis for Emirates Global Aluminium (EGA), Dubai

Lucknow, India

- **Cut repeat SLA breaches 15% quarter on quarter and lifted SLA compliance 8 points** by analysing performance data across two UAE industrial sites to expose failure patterns and backlog bottlenecks.
- **Reduced repeat incidents 18% against baseline** through root cause analysis on high-impact failures, using trend analysis and cross-team investigation to isolate underlying process and technical drivers.
- **Achieved 90%+ closure of agreed corrective actions within target** by partnering with service desk, infrastructure, application and business stakeholders to validate findings and agree remediation.
- **Cut manual reporting effort 30%** by standardising monthly management reporting across incident volume, SLA compliance, backlog and resolution time — redirecting that time into investigation.
- Migrated reporting from BMC Remedy to ServiceNow mid-contract, rebuilding the reporting layer on a new data source with no break in monthly management reporting.

HDFC Life — Corporate Agency Manager

Sep 2020 – Jan 2022

Bancassurance — RBL Bank partnership, Uttar Pradesh

Lucknow, India

- **Lifted conversion from 15% to 35% and took the territory to #1 in Uttar Pradesh** by analysing sales and premium performance across five bank branches to find where conversion was breaking down.
- Produced **weekly** performance reporting for branch and regional management, tracking conversion, premium volume and activity against target.

EDUCATION

Aston University

Jan 2024 – Jan 2025

MSc Business Analytics (Merit)

Birmingham, UK

- Dissertation: applied natural language processing to financial fraud detection, taking model performance from near-unusable to reliable — **a 4.6× improvement in precision-recall AUC (0.14 to 0.64)**.

Amity University

2013 – 2016

BCom (Honours), Commerce & Finance

Lucknow, India
